

Technical Analysis is the forecasting of future price movements based on an analysis of past price movements of the various securities. Technical analysis can help investors / traders what is "likely" to happen to stock prices over me, and how to manage portfolio tracking market trend, entry and exit point in different kind of securities like Equity ,commodity currency and F & O market. It is not science, So there is not thumb rules for technical. Analysis of charting shows contradict between to investors some me. It can help to get continue return from market in spite of up and down. ISFM having edge in technical analysis course in Gurgaon. We customize the course as per demand of investor and Traders.
